

Cirona™ 6300

Deep Vein Thrombosis Prevention Therapy System

Cirona™ 6300 DVT Prevention Therapy System

The **Cirona™ 6300** is a portable DVT compression therapy pump. Like its predecessors, the 6100 and 6200 compression therapy pumps, the **6300** offers patients customizable therapy options that can increase blood circulation and decrease venous pressure in their extremities by compressing the affected limbs with graduated compression. The **6300** pump can also reduce wound healing time and can aid in the treatment of stasis dermatitis, venous stasis ulcers, and chronic venous insufficiency.

Battery Life: 7-8 Hours

Features and Benefits:

Easy to Use: Simply wrap the sleeve around your calf and press and hold the power button until the pump starts to inflate. Treatment begins.

Comfortable: The sleeves are made of soft, breathable fabric so that therapy is never painful or uncomfortable.

Portable: The **Cirona™ 6300** is the first portable DVT prevention device from Devon Medical Products. No more being tied down and stuck in one spot during treatment.

What is Deep Vein Thrombosis?

Deep Vein Thrombosis, or DVT, is a condition in which a blood clot forms in a vein inside a muscle in the body, commonly the leg. DVT can happen to anyone and usually will occur in patients after surgery, illness or injury that renders them immobile for a considerable length of time. Symptoms of DVT include swelling, pain, and redness of the skin.
